

The new fibre cabinet serving Churchtown went live on 5th July 2018, and 60 – 80Mbps is the sort of download speed people can expect to receive if they live near to the cabinet. Those who have expressed an interest in signing-up on the CC website to use this service will be automatically informed, and anyone else interested should contact their provider. BT have been asked to ensure that a large ‘superfast is here’ sticker is placed on the cabinet.

Rory Stewart MP was very supportive of the council’s position in a call with BDUK last week and set them a deadline of 31 July 2018 to resolve their issue with BT that is holding up deployment in Welton. It is hoped to be able to enact the necessary change request in early August and a further meeting is due to take place with BDUK senior management in Westminster on 6th August to make sure that happens.
